SUMMARY

Computer Science student at TUM (GPA 1.6) who builds and ships LLM-powered products. As founding engineer at nemox GmbH, took a logistics accounting tool to ~65 enterprise users and five-figure ARR; at START Munich, lead the 7-person team behind the club's software and infrastructure. Currently building Pollux, an open-source agent that keeps docs in sync with code.

EDUCATION

B.Sc. in Computer Science | Technical University of Munich (TUM) | Germany *Oct 2025 – Aug 2028*

- Current GPA: 1.6/1.0 German grading scale, ranking in the top 7% of cohort.
- Relevant foundation in Python, Java, OCaml, and full-stack development through coursework and applied projects.

IB Diploma & Turkish High School Diploma | ITU Development Foundation Schools Ekrem Elginkan High School | Turkey *Sep 2021 – Jun 2025*

- IB Diploma: 44/45, top ~0.5% worldwide; equivalent to German Abitur 1.0.
- SAT: 1500/1600, top ~1% worldwide; B.Sc. Informatics aptitude assessment: 99/100.
- GPA: ~96.7/100; high honors in Grades 9–12 and Certificate of Distinction for three consecutive years of high honors.

EXPERIENCE

Founding Engineer, Working Student | nemox GmbH | Germany *Feb 2026 – Sep 2026*

- Owned a logistics accounting product end to end, from architecture and product design to deployment, and grew it to ~65 enterprise users and five-figure ARR.
- Built LLM-based OCR pipelines that turn unstructured logistics documents into accounting data, implemented the logistics accounting logic, and integrated with customers' transport management systems (TMS).
- Worked closely with customers to understand how they used the tool and what they needed, and turned their feedback into the roadmap for a product built for power users.

Technology & Operations Managing Director | START Munich | Germany *Nov 2025 – Present*

- Lead a team of 7 that owns the club's internal tools, software, and infrastructure.
- Run the department's financial and project planning, and coordinate priorities across teams and departments.

RESEARCH & PROJECTS

Pollux Agent | Open-Source GitHub App | Go, LLM agents, GitHub Actions *Sep 2026 – Present*

- Built a GitHub App that reads each pull request's diff, finds the docs it affects, and has an LLM agent propose exact edits as review comments; a required merge check stops docs drift before merge.
- Keeps docs agent-legible: plain markdown whose frontmatter maps every doc to the code it covers, so coding agents and engineers can trust it as context.
- Building connectors to external tools, starting with Notion, so docs stay current in whatever app a team already uses.

Recruiting Platform | Full-Stack Web Applications | Next.js, TypeScript, PostgreSQL *Mar 2026 – Present*

- Lead developer and owner of the software behind START Munich's recruiting phase; 500+ applications evaluated through it so far.
- Recruiting Tool (40 members): assigns screeners and interviewers, collects evaluations, and drives the final decisions.
- Interactive Recruiting (85 members): logs candidate activities across the phase, with approval-based points and a live leaderboard.

Personal Task Automation | Self-Hosted | Hermes, Notion API, Apple Shortcuts, Claude *May 2026 – Present*

- Built a to-do system around one Notion database, fed by homework and voice notes, with deadline reminders via Apple Shortcuts.
- Automated TUM Artemis homework tracking: began as an agentic Hermes workflow, then simplified to a deterministic daily job that calls Artemis endpoints and syncs required work to Notion without duplicates.
- Added voice capture: Wispr Flow dictation → Apple Shortcuts → email → scheduled Claude session that files them in Notion.

Concrete Image Classifier CNN Model | Deep Learning Project *Jun 2025*

- Trained a PyTorch CNN to classify broken vs. solid concrete images and benchmarked it against a fine-tuned ResNet-18.

Rainfall Prediction Classification Model | Machine Learning Project *Jun 2025*

- Built Random Forest and Logistic Regression rainfall models with scikit-learn, reaching 0.83 accuracy and 0.779 recall.

Nanotechnology Research in Physics | TUBITAK Finalist Research *Apr 2023 – May 2025*

- Researched PMMA polymers with silver nanoparticles for applications in energy storage, optics, and medicine.

TECHNICAL SKILLS & LANGUAGES

Languages & Frameworks: TypeScript, Python, Go, Java, OCaml, SQL, Next.js, React, React Native, Tailwind CSS

AI & Data: LLM agents, OCR pipelines, PyTorch, TensorFlow, Keras, scikit-learn, NumPy, Pandas, OpenCV

Infrastructure & Tools: PostgreSQL, Drizzle, Docker, GitHub Actions, Git, Supabase, Sentry, Claude Code

Certifications: IBM AI Engineering Professional Certificate (Coursera, 2025)

Languages: Turkish (native), English (C1; CAE 2023, IELTS 2024), German (C1; TELC 2025)
